

Set 2

2A

- 1) Simplify $x - 5y + 3x + 5y - 4x$
- 2) Solve the inequation $5x > 20$
- 3) Calculate the mean, median, mode and range:
208, 107, 392, 115, 302, 208

2B

- 1) List the factors of 24
- 2) Solve the equation $8x + 1 = 17$
- 3) Calculate $7\frac{5}{6} + 3\frac{1}{3}$

2C

- 1) Calculate $3\frac{1}{2} + 4\frac{2}{7} + \frac{1}{28}$
- 2) Expand $3(2 - 5a)$
- 3) When the old farmer died, he left his land to his five daughters.

Each daughter had three sons and each daughter gave $\frac{1}{3}$ of what she received to each of her sons. What fraction of the old farmer's land did each boy get?
